HGO-LTE-antenna W

A handy IoT combo antenna for both LTE and LoRa® frequencies.

Perfect for the MikroTik KNOT LR series!

No need to buy several antennas for your Internet-of-things setups – just grab the new HGO-LTE-W antenna that can handle an impressive frequency spectrum: 699MHz – 3,8GHz.
That's right – you can use the same antenna for LTE, CAT-M/NB and LoRa® connectivity.

This antenna will transmit whichever signal your modem provides. For example, if you are using our KNOT LR8/LR9 kit, you can use this powerful 1.5 – 4 dBi antenna to communicate with all your 868 MHz devices and then send the data to the cloud via LTE.

Specifications

Product code	HGO-LTE-W
Connector type	SMA male
Operating temperature	-40°C to +70°C
