DQ+BC0003-DS+

DQ+BC0003-DS+ is a QSFP56 200G to 4× 50G break-out cable designed to unlock the full flexibility of our recent 200G and 400G platforms.

It allows you to **split a single 200 Gigabit QSFP56 port into four independent** 50 Gigabit connections – perfect for maximizing port utilization and connecting multiple high-speed devices without additional hardware.

Just like its predecessor XQ+BC0003-XS+, this cable also supports splitting:

- 100G into 4×25G
- 40G into 4×10G

And now adds:

- **200G into 4×50G**

This extended compatibility makes it an ideal companion for next-generation switches such as the **CRS812 DDQ** and **CRS804 DDQ**, enabling flexible 200G/400G port deployments without complexity.

The cable is 3 meters long – the perfect length to reach all the necessary spots while keeping your server room neat and tidy.
